# OpenType Layout Features

For details about OpenType Layout Features see the [OpenType Layout tag registry](#).

## Substitution Features

### Access All Alternates

This feature makes all variations of a selected character accessible.

### Small Capitals

This feature turns lowercase characters into small capitals. This corresponds to the common SC font layout. It is generally used for display lines set in Large and small caps, such as titles. Forms related to small capitals, such as oldstyle figures, may be included.

### Small Capitals From Capitals

This feature turns capital characters into small capitals.

### Contextual Alternates

In specified situations, replaces default glyphs with alternate forms which provide better joining behavior.

### Standard Ligatures

Replaces a sequence of glyphs with a single glyph which is preferred for typographic purposes. This feature covers the ligatures which the designer/manufacturer judges should be used in normal conditions.

### Discretionary Ligatures

Replaces a sequence of glyphs with a single glyph which is preferred for typographic purposes. This feature covers those ligatures which may be used for special effect, at the user's preference.

### Old Style Figures

This feature changes selected figures from the default lining style to oldstyle form.

### Lining Figures

This feature changes selected figures from oldstyle to the default lining form.

### Proportional Figures

Replaces figure glyphs set on uniform (tabular) widths with corresponding glyphs set on glyph-specific (proportional) widths.

### Tabular Figures

Replaces figure glyphs set on proportional widths with corresponding glyphs set on uniform (tabular) widths.

### Slashed Zero

Some fonts contain both a default form of zero, and an alternative form which uses a diagonal slash through the counter. This feature allows the user to change from the default 0 to a slashed form.

### Numerators

Replaces selected figures which precede a slash with numerator figures, and replaces the typographic slash with the fraction slash.

### Denominators

Replaces selected figures which follow a slash with denominator figures.

### Fractions

Replaces figures separated by a slash with 'common' (diagonal) fractions.

### Superscript

Replaces lining or oldstyle figures with superior figures (primarily for footnote indication), and may replace lowercase letters with superior letters (primarily for abbreviated French titles).

### Subscript

The "subs" feature may replace a default glyph with a subscript glyph.

### Ordinals

Replaces default alphabetic glyphs with the corresponding ordinal forms for use after figures.

### Case-Sensitive Forms

Shifts various punctuation marks up to a position that works better with all-capital sequences or sets of lining figures; also changes oldstyle figures to lining figures.

### Localized Forms

This feature enables localized forms of glyphs to be substituted for default forms.

### Stylistic Set 3

## Positioning Features

### Capital Spacing

Globally adjusts inter-glyph spacing for all-capital text. Most typefaces contain capitals and lowercase characters, and the capitals are positioned to work with the lowercase. When capitals are used for words, they need more space between them for legibility and esthetics.

### Kerning

Adjusts amount of space between glyphs, generally to provide optically consistent spacing between glyphs.

### Mark Positioning

Positions mark glyphs with respect to base glyphs.

### Mark to Mark Positioning

Positions marks with respect to other marks. Required in various non-Latin scripts like Arabic.
